

Discussion 4: ANOVA vs. MANOVA

Answer these two quick questions in your main post:

1. **ANOVA vs. MANOVA:** What is the core difference between ANOVA and MANOVA? (Hint: Think about the number of dependent variables).
2. **R Setup:** How do you combine multiple column vectors into a single data frame in R to run a MANOVA?
3. **References:** To complete your work, find academic websites or trusted sources (e.g., university guide, peer-reviewed journal, or official R documentation) that explain the differences between ANOVA and MANOVA or multivariate data setup in R. Include the link and cite.

Post your initial response by Friday October 2.

Peer Response Instructions (Due Sunday by 11:59 PM): Reply to at least two classmates using 2–3 sentences per response. Provide meaningful feedback by highlighting a key strength in their response or gently explaining any concepts they could clarify.

Note: Short comments like "Great post!" or "I agree!" will not receive credit.
