

ALY 3015

Assignment 1

Varsha S. Kulkarni

There are 2 questions in this assignment referring to data analysis. You should implement your analysis in R and show the output as required in the questions and submit on time.

1. In R, for the “PlantGrowth” data, answer these
 - (i) How many groups are there?
 - (ii) Test the ANOVA, are the means equal?
 - (iii) Give the box plot, are there any two groups most similar to appear in there?
 - (iv) Which pairs are significantly different?
 - (v) Are all of the assumptions of Anova satisfied in this? Comment

2. In the regionalsales data, there are 3 regions reg1, reg2, reg3 for which sales are reported. We want to know which pairs of regions if at all have significantly different average sales.
 - (i) Draw the box plot and state the results of Anova. What is your result?
 - (ii) If there is a difference, which pair/s are significantly different? State the result and tests you used with the output in R.

(You should convert the excel to csv and import into R)
